

# TxDOT **MVInet** versus QuickView's **QuickVTR**

## Daily User experience

- MVInet: Single web site and users will have to use Windows login screen to enter their User ID and password for access. TxDOT also requires the Windows password save box to never be used per their contract.
- QuickVTR: Custom web site with all users displayed as icons, which eliminates User ID entry. Simply click on your icon and enter a password in enhanced login box. We also provide icon pre-select and legal one-day password saving check boxes.

## Passwords

- MVInet: Must be exactly 8 characters long. At 90-day expiration, you must pick a new password that has not been used in the last 270 days. If you enter an incorrect password 4 times over a period of time, your User ID will be suspended.
- QuickVTR: Can be 6 to 8 characters long. At 90-day expiration, we recommend that you pick a new password, but you may continue to use your existing password. You may enter an incorrect password many times and your User ID will never be suspended.

## Web site Reliability

- MVInet: When TxDOT's single server MVI service is down, their web site will be unavailable and you'll have to call their tech support to report the problem and to get a recorded message of their estimated time of availability.
- QuickVTR: Even if TxDOT's MVI service is down, your QuickVTR web site is never down because we use dual servers, with one located off site. There will be a message on your custom QuickVTR web site detailing TxDOT's status and availability. You'll never have to call our tech support to find out what is going on.

## Vehicle Database

- MVInet: TxDOT RTS (Registration and Titling System) database is used.
- QuickVTR: TxDOT RTS (Registration and Titling System) database is used.

## Vehicle Registration Inquiries

- MVInet: Pick one of 5 separate forms for inquiries. Only one form allows up to 5 Plate inquires. VIN entry form does not verify correct entry.
- QuickVTR: Only one smart form is used for all inquires. All Plate, VIN, Document and Sticker requests may be entered up to 15 times for a batch inquiry. VIN entries are verified as valid before inquiry, which prevents most "NO RECORD IN RTS DATABASE" responses.

## TxDOT **MVInet** versus QuickView's **QuickVTR** continued

### Vehicle Registration Responses

- MVInet: Standard format response in black and white.
- QuickVTR: Standard format response but enhanced with color for less eyestrain and improved readability. In fact, we use bright red colors to highlight important information such as: Expired registration, Plate age, Stolen, Flood, Registration Purposes Only (RPO), etc. Label option enabled will display owner and lien hold in an easy to read format.

### Adding new users

- MVInet: Fill out TxDOT B and C form for new user and mail to TxDOT. You'll receive new users W code by mail in 7 to 14 days if there are no form errors.
- QuickVTR: Fill out our one B form for a new user and FAX to QuickView. You'll receive new users ID and temporary password in as little as 15 minutes by phone or email.

### Management and Security

- MVInet: No features are available to help manage or provide security.
- QuickVTR: Security features are built in. Three months of on-line management reports keep tabs on user inquiries by date, time and records accessed.

### Extra Selection Features

- MVInet: None.
- QuickVTR: Auto print after inquiry selection. Page break selection allows multiple inquiries to be placed on separate printed pages. Labels selection will allow Owner, Renewal Receipt and Lien holder to be printed directly by computer attached Dymo LabelPrinter. Memo selection allows extra information to be stored about Inquiries for compliance matters.

### Cost

- MVInet: Deposit, monthly base charge and pay per click. TxDOT also requires one contract and deposit per location, even if the other location is just across the street. You also get to pay for all VIN entry mistakes and duplicate inquiries, which averages an additional 18% every month
- QuickVTR: No deposit and service levels similar to cell phone plans. You can have just one contract with us for multiple locations. Since we save your records for a period of time and prevent VIN entry errors, we eliminate the 18% overage, which makes us the lowest cost of any available Commercial or State product.
